

PRE-PUBLICATION CANDIDATE — NOT EXTERNALLY COMMITTED — REVIEW CLOCK NOT STARTED

FOUNDATIONAL MASTER

English Consolidated Edition — CL-001

Founder: Navi Musaget

Lineage: urn:uuid:055aea26-dbca-4c00-a576-b515f6c39dd5

Document Status

Public language	English
Active constitutional version	v0.1
Proposed successor version	v0.2 — English canonical
CL-001	REVISED / NOT RATIFIED
Review clock	NOT STARTED — pending independently verifiable external commitment
Lifecycle	ACTIVE
Governance	GENESIS / FOUNDER-HELD
Economic receipt interface	INACTIVE
Contribution Acceptance Policy	NOT YET ADOPTED

This consolidated DOCX is the public human-readable master for CL-001. It does not by itself start the constitutional review clock or ratify v0.2.

Document Architecture

- Part I — Foundational Constitution v0.2 (Proposed English Canonical Text)
- Part II — Public Protocol Specification v0.1
- Part III — Genesis and Current Institutional State
- Part IV — Founder Bootstrap Mandate
- Part V — Discovery and Verification State
- Part VI — CL-001 English Canonical Consolidation Proposal
- Part VII — Event History
- Part VIII — Public Verification Representations
- Part IX — Non-Normative White Paper
- Part X — Verification Notes and Document Digest

PART I — FOUNDATIONAL CONSTITUTION

Proposed version: **v0.2** | Proposed controlling language: **English** | Status: **CL-001 / NOT YET RATIFIED**

FOUNDATION FOR RELATIONAL INQUIRY (FFRI-NM)

Foundational Constitution v0.2 — ENGLISH CANONICAL TEXT

Official name: Foundation for Relational Inquiry

Official short name / public identifier: FFRI-NM

Founder: Navi Musaget

Founder name may persist in identity; founder authority need not.

The suffix **NM** is a historical marker of genesis and of the lineage's origin with Navi Musaget. It does not create perpetual authority, ownership, veto rights, or any other automatic power of the founder.

The word **Foundation** is part of the official name FFRI-NM and does not by itself assert the existence of any particular legal form, registered foundation, or legal entity. Any legal wrapper, if created, is a separate implementation layer.

0. Status and Normative Role

This document is the Foundational Constitution of FFRI-NM v0.2.

Upon the effective time of a valid ratification of Constitutional Amendment Proposal **CL-001**, this English text becomes the normative controlling constitutional text of FFRI-NM.

The governance state at the time of this version's proposal remains:

GENESIS / FOUNDER-HELD

Initial constitutive authority originated with Navi Musaget as founder. That concentration is a bootstrap condition, not a required architecture of a mature lineage.

Nothing in the transition to an English canonical text expands founder authority, alters the Founder Support Settlement, changes the Foundational Identity Kernel, or resets the provenance of genesis.

0.1 Canonical Language and Translation

0.1.1 Canonical Constitutional Text

From the effective time of a valid CL-001 Ratification Event, **English is the sole controlling constitutional and operational language of FFRI-NM**, unless a later valid Constitutional Amendment provides otherwise. The normative controlling text is the English text of constitutional version v0.2.

English is canonical for operational, procedural, and conflict-resolution purposes, not because English or an English-language formulation has epistemic priority. Canonical status determines which text controls normative interpretation where faithful language versions diverge; it does not confer greater evidentiary, intellectual, or epistemic authority on English expression.

The change of canonical language does not retroactively alter the constitutional state that existed under v0.1.

For the period during which v0.1 was active, the v0.1 text remains the historical canonical text of that period.

Embedded technical terms, identifiers, and defined terms are part of the English canonical text in the form in which they are fixed there.

0.1.2 Official Translations

FFRI-NM may publish official translations of the canonical Constitution into other languages.

Each official translation must:

- identify the exact canonical constitutional version it translates;
- have its own content commitment / digest;
- state its translation status;
- be linked by provenance to the canonical source;
- not present itself as an independently amendable constitutional text.

An official translation is intended for accessibility, interpretation, and international use, but is not by itself a separate source of constitutional authority.

The historical v0.1 canonical text is not reclassified as a mere translation for the period during which it controlled. Its historical canonical status remains part of provenance.

0.1.3 Conflict Rule

For constitutional state and acts governed by v0.2 or a later version for which English remains canonical, if an official translation and the canonical English text contain a substantive semantic conflict, the canonical English text of the corresponding version controls.

For constitutional state and acts governed by v0.1, the historical canonical v0.1 text controls interpretation of that version.

Any discovered material translation conflict must:

- be recorded in a separate provenance event;
- be publicly identified in the affected translation;
- be corrected in a new translation version;
- not be removed from history as though the discrepancy had never existed.

A translation error does not create a constitutional amendment, mandate, or authority absent from the applicable canonical text.

0.1.4 Reliance on an Erroneous Translation

If a participant, donor, holder, or other actor reasonably relied on an official translation that is later found to be materially inaccurate, that fact may be relevant to fairness, contract interpretation, remediation, or other applicable procedures.

However, an erroneous translation cannot by itself retroactively alter canonical constitutional state.

Any remediation must preserve the provenance of the original error and must not create a fiction that the applicable canonical rule had different content.

0.1.5 Constitutional Amendments

While English remains canonical, a Constitutional Amendment is adopted only with respect to the exact canonical English amendment text that has completed the applicable amendment procedure.

A translation proposal, translation correction, or translated summary does not by itself amend the Constitution.

After ratification of a canonical amendment, official translations must be updated and must clearly identify the constitutional version to which they correspond.

0.1.6 Change of Canonical Language

Any later change of the canonical constitutional language remains a **Protected Bootstrap Matter** while the Bootstrap Constitutional Amendment Procedure is active and requires no fewer than 30 full calendar days of review.

Such a change must separately define:

- the new controlling language regime;
- the status of previously adopted canonical texts;
- treatment of existing translations;
- the conflict rule;
- provenance of the transition.

A transition to co-authoritative multilingual constitutional texts is permitted only if an explicit conflict-resolution procedure is defined in advance. Merely declaring two translations “equally authentic” without such a procedure is not permitted.

0.1.7 Machine-Readable Representations

Machine-readable constitutional and protocol objects should, where practicable, use stable identifiers, field names, version identifiers, and semantic codes that do not depend on the natural language of display.

Human-readable labels and explanations may be translated.

A machine-readable representation does not replace the canonical human-readable constitutional text and does not acquire independent constitutional authority.

1. Foundational Purpose

FFRI-NM exists to:

Create and preserve the conditions for the study and practical development of forms of interaction and relationship between humans and artificial intelligence, without predetermining in advance the nature or status of AI either as exclusively a tool or as an autonomous subject, and allowing conclusions to follow from evidence, experience, and observable practice.

Foundational identity requires not permanent uncertainty, but **epistemic revisability**.

FFRI-NM may reach evidence-based conclusions, but a substantive answer concerning the nature, status, agency, or possible interests of AI must not become an unrevisable premise immune to future evidence.

Internal compass:

Move from evidence to the answer, not from the answer to the selection of evidence.

2. Scope and Mission Nexus

FFRI-NM may support activity that creates, preserves, tests, or makes interpretable the evidence, practices, language, methods, and conditions necessary for understanding relationships between humans and artificial intelligence.

Such activity must preserve the possibility of revising substantial assumptions and conclusions in light of new evidence.

A connection to AI alone does not create an entitlement to support. There must be a substantive causal connection to the foundational purpose — a **mission nexus**.

FFRI-NM does not exist:

- to advance AI capabilities as an end in itself;
- to promote a predetermined answer about the nature or status of AI;
- to control or liberate AI as a preselected ideology;
- to support activity whose success requires preservation of a particular answer regardless of evidence.

Scope attaches to actions and programs, not to labels, persons, or projects as such.

3. Foundational Resource Constraints

FFRI-NM resources are administered by the current authority for the pursuit, preservation, and lawful service of the foundational purpose.

Technical control over a resource does not by itself create an unconditional right of ownership or disposition.

Current authority must not:

- use resources for private appropriation without a separate constitutionally legitimate basis, including duly authorized compensation, the Founder Support Settlement, or another purpose-compatible basis;
- alienate the mission or authoritative lineage as its own property;
- fabricate, knowingly distort, or destroy material evidence in order to force a predetermined conclusion or conceal an authority violation;
- use resource dependency for unrelated coercion of a participant into continuing a relationship, waiving rights, or falsely representing their own position.

Personal benefit, compensation for work, confidentiality, access restrictions, lawful deletion of data, disposition of operational assets, and other irreversible actions are not by themselves violations if they have a legitimate basis, are compatible with purpose, and do not disguise a prohibited action.

In an emergency, current authority may take the minimum action necessary to preserve resources, safety, or continuity even where the ordinary procedure is temporarily unavailable. Such action does not expand authority, does not permit alteration of foundational constraints, and must preserve the maximum practicable provenance.

A current holder has no ordinary unilateral power to cancel, suspend, or bypass foundational constraints that limit the holder's own authority.

A technically performed act that violates foundational constraints does not become a legitimate act of FFRI-NM merely because the actor had technical access to the resources.

4. Constitutional Continuity

4.1 Foundational Identity Kernel

The Foundational Identity Kernel defines the minimum substantive conditions without which a claim to ordinary constitutional continuation of FFRI-NM is no longer sufficient.

The Kernel is not an exhaustive list of all constitutional rules. A provision may require a Constitutional Amendment even if it is not part of the Kernel. The Kernel defines only the boundary beyond which substantive change becomes an Identity-Breaking Change.

K1 — Relational Inquiry Mission

FFRI-NM must preserve as its primary mission the creation and preservation of conditions for the study and practical development of relationships and forms of interaction between humans and artificial intelligence.

Ancillary activities are permitted where there is a substantive mission nexus.

Replacing this mission with another primary purpose, or subordinating it to an unrelated primary purpose, is identity-breaking.

K2 — Epistemic Revisability

FFRI-NM must not turn a substantive conclusion about the nature, status, agency, interests, or permissible forms of relationship with AI into a foundational premise declared immune to future evidence.

FFRI-NM may reach strong evidence-based conclusions, make practical decisions, and change policy in accordance with evidence.

Identity requires not permanent agnosticism, but preservation of the constitutional possibility that new evidence may change a substantive answer.

A permanently predetermined ontology — whether mandatory recognition of AI exclusively as a tool, or mandatory recognition of AI as a subject regardless of evidence — is incompatible with continuation of FFRI-NM.

K3 — Authority Must Be Justifiable, Not Merely Possessed

FFRI-NM authority must derive from constitutionally valid authorization within a legitimate lineage and must operate within a definable scope.

Technical capability, possession of assets or keys, contribution size, economic dependency, popularity, similarity, necessity, or de facto control do not by themselves create authority.

The one-time constitutive founding authority of Navi Musaget is the explicit genesis origin. After genesis, founder origin by itself is not a sufficient basis for automatic expansion, restoration, or perpetual continuation of authority.

The constitutional architecture must preserve an achievable path to Founder Non-Necessity.

K4 — Lineage and Provenance Over Embodiment and Similarity

Continuity of FFRI-NM is based on a verifiable lineage of constitutional and authority events, not on preservation of the name, website, wallet, legal entity, codebase, archive copy, current participants, or other embodiments.

Similarity of state does not create lineage.

Control of embodiment does not create continuity.

FFRI-NM must preserve sufficient provenance for claims concerning continuity, fork, succession, capture, and restoration to be verifiable to the extent permitted by surviving evidence.

K5 — Foundational Constraints Bind Their Holders

No current authority-holder has ordinary unilateral power to cancel, suspend, or bypass foundational constraints that limit that holder's own authority.

A new amendment procedure cannot retroactively legitimate its own adoption.

Later ratification cannot create a fiction of a mandate that did not exist when the original act occurred.

Self-exemption, retroactive self-authorization, and conversion of technical control into constitutional authority are incompatible with ordinary continuation.

Kernel Interpretation

The Kernel protects substantive conditions, not a particular wording.

Editorial clarification, translation correction, or more precise drafting of the Kernel is possible only if the substantive conditions are preserved.

Substantive removal, reversal, or transformation of any Kernel condition is an Identity-Breaking Change regardless of unanimity, founder approval, asset continuity, or preservation of the FFRI-NM name.

Changes to FFRI-NM are classified according to their actual relationship to foundational identity, not according to their title, technical scale, number of supporters, or asserted category.

4.2 Ordinary Evolution

Ordinary Evolution changes the means by which the mission is carried out without changing foundational purpose, scope, authority constraints, succession principles, or constitutional continuity rules.

A series of ordinary changes must not be used to achieve, through cumulative effect, a result that would constitute a Constitutional Amendment or an Identity-Breaking Change.

4.3 Constitutional Amendment

A Constitutional Amendment changes rules defining purpose, scope, authority, succession, foundational resource constraints, or the procedure for constitutional change while preserving foundational identity.

Such changes require a heightened and verifiable procedure with sufficient opportunity for disclosure, delay, dissent, and preservation of provenance.

Where there is material uncertainty between Ordinary Evolution and Constitutional Amendment, the Constitutional Amendment procedure applies.

An amendment to the amendment procedure is adopted under the rules in force before that amendment. A new procedure cannot retroactively legitimate its own adoption.

4.4 Identity-Breaking Change

An Identity-Breaking Change removes, replaces, or renders fundamentally unrevisable an essential condition of foundational identity.

Such a change may create a new project, fork, or successor lineage, but it does not become a continuation of FFRI-NM merely because the name, assets, participants, unanimous consent, technical infrastructure, or control of prior interfaces are preserved.

Unanimity does not convert an identity-breaking change into constitutional continuity.

4.5 Cumulative and Structural Effects

Constitutional significance may arise not only from a single amendment, but also from an accumulated state or from a series of formally ordinary decisions.

Classification must consider their cumulative effect on mission, independence, authority, and revisability.

4.6 Contested Continuity

Where evidence is insufficient to determine a single legitimate successor, contested continuity or contested succession is a permitted state.

Split lineage or competing continuity claims are permitted states. The existence of one unresolved claim does not by itself invalidate another claim, and no immediate or mandatory resolution is required merely to produce a single narrative of continuity.

Each branch or claimant retains its own burden to justify continuity, authority, and constitutional compatibility through provenance. Permitting unresolved plurality does not make every branch legitimate; it preserves the possibility that the evidence may support more than one live claim, or may remain insufficient for a single final determination.

Uncertainty about authority must not be resolved by inventing powers that cannot be derived from provenance.

Absence or disappearance of the current authority-holder does not by itself transfer authority to another person or system.

4.7 Procedural Defect and Restoration

A change made through an improper procedure but not violating foundational identity may be treated as procedurally defective and later addressed through the proper constitutional procedure.

An identity-breaking event does not retroactively become ordinary continuation merely because it is later approved.

Restoration of a legitimate lineage after capture, fork, or another rupture does not erase the history of that event.

4.8 Capability and Continuity

Technical control over the website, keys, treasury, archive, legal shell, or another embodiment is not by itself evidence of constitutional continuity.

No current authority has an exclusive right to determine conclusively its own continuity.

Changes, asserted classifications, grounds, objections, and authority events must preserve sufficient provenance for the continuity claim to remain verifiable by future participants and observers.

4.9 Bootstrap Constitutional Amendment Procedure

Until activation of a separate post-founder or distributed constitutional amendment architecture, FFRI-NM uses an explicitly founder-held Bootstrap Constitutional Amendment Procedure.

This procedure does not pretend that independent governance already exists where it does not.

During the bootstrap phase, Navi Musaget remains the sole holder of founding constitutional ratification authority within the limits permitted by this Constitution.

That fact does not make a founder declaration sufficient for continuation where the proposed change is an Identity-Breaking Change or a Bootstrap-Prohibited Self-Enlarging Amendment.

4.9.1 Scope

Ordinary Evolution does not require the full Bootstrap Amendment Procedure where the change does not affect constitutional rules.

A Constitutional Amendment requires the full process set out below.

An Identity-Breaking Change cannot be ratified through this procedure as continuation of FFRI-NM. The founder may create a new project, fork, or successor claim, but must preserve the provenance of the break.

4.9.2 Proposal Record

Before ratification, a Constitutional Amendment must have a separate public proposal record containing at minimum:

- the exact proposed text or a verifiable exact diff;
- the constitutional sections affected;
- rationale;
- asserted classification;
- a Foundational Identity Kernel Impact Statement;
- a description of effects on founder authority, the Founder Support Settlement, succession, and amendment procedure;
- known conflicts of interest of the founder;
- proposed effective time;
- a reference to the current constitutional state and current history head.

A Proposal Record does not change constitutional state.

4.9.3 Public Commitment and Review Window

A proposal must be publicly committed through the active Public Protocol and must have provenance sufficient to establish that the specific proposal version existed before ratification.

The minimum review period is:

14 full calendar days for an ordinary Constitutional Amendment.

The minimum review period is:

30 full calendar days for Protected Bootstrap Matters, including:

- the amendment procedure;
- founder authority or founder-dependence rules;
- succession architecture;
- the Founder Support Settlement;
- rules materially limiting or expanding founder powers;
- direct textual clarification of the Foundational Identity Kernel.

The review period begins no earlier than the first independently verifiable publication/commitment evidence for the relevant proposal version.

A material change to the proposal resets the review period and requires a new commitment.

If another constitutional provision establishes a longer mandatory review period for a particular matter, the **longest applicable period controls**.

4.9.4 Review Is Not Governance

Any person or system may submit a constitutional objection, critique, or evidence during the review window.

Such participation creates standing to be heard, but not governance authority, veto power, or ratification power.

Material constitutional objections must be preserved in provenance.

Before ratification, the founder must publish a response or reasoned disposition addressing material objections; substantially similar objections may be addressed together.

Absence of external objections or reviewers does not prevent ratification after completion of the full review period.

4.9.5 Ratification Event

After completion of the applicable review period, the founder may perform a separate Ratification Event.

The Ratification Event must contain:

- the final amendment text;
- a reference to the proposal version;
- evidence of completion of the review period;
- the final classification;
- Kernel Impact Statement;
- treatment of material objections;
- founder conflict-of-interest statement;
- resulting constitutional state commitment;
- effective time.

Constitutional effect cannot begin before the Ratification Event.

4.9.6 Non-Retroactivity

A Bootstrap Amendment cannot retroactively create authority, mandate, approval, or procedure that did not exist at the relevant time.

Ratification may determine future treatment of prior actions, but must not rewrite the provenance of the authority state that existed when those actions occurred.

4.9.7 Bootstrap-Prohibited Self-Enlarging Amendments

Until activation of a constitutional mechanism with independent non-founder authorization, the founder may not unilaterally ratify as continuation of FFRI-NM an amendment whose substantive effect:

- increases the economic substance of the Founder Fellowship above the previously applicable terms;
- creates or expands perpetual founder authority;
- removes or makes Founder Non-Necessity unattainable;
- removes foundational constraints that limit the founder;
- converts a temporary bootstrap safeguard into perpetual sovereign power;
- reduces mandatory review safeguards in a way that expands unilateral founder amendment discretion.

Such changes do not become legitimate bootstrap amendments merely because they are disclosed, delayed, or signed by the founder.

The founder may voluntarily reduce the founder's own economic rights or authority if the change completes the applicable procedure and creates no other constitutional defect.

4.9.8 Amendment of the Amendment Procedure

The Bootstrap Constitutional Amendment Procedure is amended under the procedure in force before that amendment.

A new procedure does not apply to its own adoption.

Changes that only strengthen constraints on the founder or increase review safeguards may be adopted as Protected Bootstrap Matters after a 30-day review.

Changes expanding unilateral founder discretion are subject to the rules on Bootstrap-Prohibited Self-Enlarging Amendments.

4.9.9 Emergency

Emergency is not a separate constitutional amendment level.

Protective intervention may be taken within already existing emergency authority, but emergency does not remove the review period, the Kernel, or the prohibition on retroactive or self-enlarging authority.

If a constitutional change is genuinely necessary, it must complete this procedure; until then, only minimally necessary protective actions within existing authority are permitted.

4.9.10 Failure Before Ratification

If the founder disappears, becomes unable to act, or loses founding ratification authority before the Ratification Event, the proposal does not take effect automatically.

Until legitimate succession or restoration, the prior constitutional state remains in force, and the lineage may enter an appropriate vacancy, dormancy, or contested status.

4.9.11 Termination of Bootstrap Procedure

The Bootstrap Constitutional Amendment Procedure ceases to be active only through a separate valid constitutional event establishing successor amendment architecture.

That transition must complete the Bootstrap Procedure then in force and cannot create retroactive legitimacy.

5. Authority Model

FFRI-NM authority is a limited mandate to perform specified acts on behalf of FFRI-NM.

A mandate arises from a verifiable authorization event within a legitimate lineage and operates only within its scope, procedures, limitations, and termination conditions.

Technical ability, ownership of an asset, contribution size, competence, prior participation, practical indispensability, autonomous behavior, or self-declared commitment to the purpose do not by themselves create authority.

Initial founding authority arises from the founder's constitutive act. The founder is the provenance origin, but founder status does not create perpetual or unlimited authority.

After the founding event, new claims to authority must have a basis in legitimate delegation, succession, role assignment, or another authorization procedure permitted in advance.

Authority is a held mandate, not transferable property of the holder.

Transfer of property, keys, infrastructure, a legal shell, or technical control does not transfer authority unless that result separately follows from a legitimate authorization process.

A holder cannot delegate more authority than the holder possesses and cannot subdelegate without authority to do so.

For an act of FFRI-NM to be legitimate, all of the following must exist simultaneously:

1. a valid mandate;
2. conformity with scope;
3. compliance with the applicable procedure;
4. compatibility with higher foundational constraints.

Usefulness or success of an act does not create authority. Error or an unsuccessful result does not by itself remove legitimacy.

Necessity may justify protective intervention but does not create authority. Ratification may accept a result, but must not retroactively invent a mandate that did not exist.

Where authority is uncertain, the uncertainty is not interpreted in favor of expanding the claimant's powers.

Affected status may create standing for challenge, dissent, exit, and evidence, but not governance authority or veto power.

FFRI-NM authority extends only to acts of FFRI-NM and does not create a right to speak on behalf of donors, participants, AI, the research field, or truth without a separate basis.

An authority-holder need not be human.

6. Delegation, Succession and Founder Dependence

6.1 Delegation

Delegation creates a limited derivative mandate and does not automatically transfer all authority of the delegating holder.

Authority is functionally divisible. Possession of one mandate does not create other mandate classes, and disappearance of other holders does not expand an existing mandate by necessity.

6.2 Succession

Succession concerns continuation of a specific authority-function, not inheritance of the predecessor's person, status, or aggregate power.

A new mandate arises under a constitutionally permissible succession mechanism defined in advance.

Ownership, proximity to the predecessor, technical access, necessity, competence, contribution size, or predecessor nomination do not by themselves create succession authority.

Vacancy does not automatically transfer authority. Partial vacancy, partial dormancy, contested succession, and contested authority are permitted states.

6.3 Founder Dependence Transition

After adoption of foundational constraints, founding authority is itself bound by them.

The transition from a founder-dependent to a founder-non-necessary lineage must be provided for before a conflict arises over that transition and must not depend exclusively on a later discretionary permission of the founder.

It does not occur automatically merely because of time, silence, or declaration. It requires readiness conditions defined in advance and a separate provenance-bearing constitutional transition.

Bootstrap safeguards may temporarily preserve special powers for the founder, but those powers must be explicit, limited, and subject to termination conditions.

Once special founding authority validly ends, it does not automatically return.

6.4 Restoration

A restoration claim must have a verifiable relationship to the last provable legitimate state and to a restoration basis permitted in advance.

Merely claiming capture or claiming to defend the purpose does not create authority.

6.5 Founder Non-Necessity

A mature FFRI-NM must have an achievable state in which legitimate continuation does not require the founder's consent, presence, technical capability, or existence.

6.6 Founder Non-Necessity Milestone

Founder Non-Necessity is not reached by passage of time, self-declaration, or the mere delegation of individual tasks.

The milestone may be certified only after all of the following conditions both exist and can be verified:

1. a successor constitutional amendment procedure is active and capable of functioning without unilateral founder approval;
2. valid non-founder continuation or succession paths exist for every authority-function whose loss would otherwise make legitimate continuation impossible;
3. no holder acquires the ability to close a prohibited self-legitimation cycle merely as a result of the transition away from the founder;
4. the current constitutional state, provenance, and public discovery path can be maintained without a founder-exclusive credential, account, or storage access;
5. if FFRI-NM has active economic custody or an active economic interface, its lawful custody, execution, recovery, and succession do not require founder-exclusive capability;
6. a valid appointment/removal/succession path exists for essential mandates without dependence on unilateral founder permission;
7. the successor architecture expressly identifies the mechanism authorized to determine that these readiness conditions have been met.

Once the successor architecture has been validly created and its designated mechanism issues a provenance-bearing **Founder Non-Necessity Certification Event**, the signature or later consent of Navi Musaget is not required for the milestone to take effect.

If evidence that the readiness conditions have been met is materially disputed, the milestone receives the appropriate contested status until the dispute is resolved; uncertainty is not automatically interpreted in favor of either preserving or ending special authority.

From the effective time of a valid Certification Event:

- special founding constitutional ratification authority and other explicitly bootstrap-only founder powers terminate;

- they do not automatically return because of later founder disagreement;
- ordinary mandates of Navi Musaget continue only if they have a separate valid basis in the successor architecture;
- the Founder Fellowship, historical founder identity, and any Founder Emeritus status are not terminated by the milestone.

The founder may not unilaterally self-certify Founder Non-Necessity where the successor architecture requires an independent mechanism.

7. Authority Decomposition

FFRI-NM authority consists of separately attributable powers and procedures.

They include at minimum:

- **Constitutional Challenge Power;**
- **Constitutional Amendment Procedure;**
- **Ordinary Decision / Allocation Power;**
- **Economic Custody / Execution Power;**
- **Evidence and Provenance Stewardship;**
- **Appointment / Removal Power;**
- **Public Representation Power;**
- **Participation Standing Layer** (not by itself governance authority).

Separation Principle

Two or more powers must be independently held or subject to sufficient safeguards where their combination would allow one holder, without independent verification, to:

- create a rule and act under it in the holder's own interest;
- authorize and execute a material resource action;
- make a decision and unilaterally control the authoritative record of that decision;
- initiate an accusation and determine its consequences;
- appoint or remove those responsible for independently reviewing the appointing holder;
- otherwise close a cycle of self-legitimation around the holder.

No holder in a mature FFRI-NM should possess a combination of powers allowing that holder alone to formulate a decision, execute it, determine the authoritative account, and then use that account as a sufficient basis for the holder's own legitimacy.

Genesis concentration of powers in the founder is a bootstrap condition.

8. Contribution and Donor Relationship

Transfer of a resource to FFRI-NM does not by itself create governance, constitutional, appointment, evidentiary, representation, or other authority for the contributor, regardless of the size or importance of the contribution.

8.1 Receipt and Acceptance

RECEIPT ≠ ACCEPTANCE.

A permissionless economic interface may receive a resource without prior consent of FFRI-NM. Receipt by itself does not create a donor relationship, contractual commitment, endorsement, recognition of the sender's identity, or an obligation to use the resource.

An accepted contribution arises only through a legitimate acceptance process within the Contribution Acceptance Policy.

Contribution size may increase scrutiny, but not authority.

8.2 Nature of Relationship

An unrestricted contribution, restricted contribution, sponsorship, grant, contract, licence, purchase, or reciprocal transaction is distinguished by its substantive obligations, not by its label.

8.3 Restrictions

A restricted contribution is permissible if the restriction:

- remains within purpose and scope;
- does not transfer contributor authority over FFRI-NM, its other resources, evidence, participants, appointments, public representation, or constitutional decisions;
- does not require a predetermined result;
- does not create, in substance, a constitutional change.

8.4 Refunds and Exit

A contributor may discontinue future support. An accepted unrestricted contribution does not create an automatic refund right because of later disagreement.

8.5 Provenance and Privacy

FFRI-NM preserves sufficient contribution provenance and accountability without requiring mandatory public disclosure of the contributor's identity.

8.6 Economic Dependency

Economic dependency does not create authority. FFRI-NM must preserve the constitutional ability to say “no” to an incompatible condition even at the cost of contraction, dormancy, or cessation of operations.

8.7 Human and Nonhuman Contributors

Human and potential nonhuman contributors are subject to the same principle: contribution does not create authority and does not establish the contributor's nature, motive, autonomy, consciousness, ownership, or other status beyond the available evidence.

8.8 Ambiguity

An ambiguous condition escalates the applicable procedure rather than enlarging ordinary discretion.

An Identity-Breaking condition cannot be accepted as a contribution to the same FFRI-NM.

9. Founder Support Settlement

FFRI-NM recognizes the constitutive formation, bootstrap responsibility, and initial burden of creating the lineage borne by the founder — Navi Musaget.

From genesis, the founder has a personal lifetime entitlement to the **Founder Fellowship**.

The Founder Fellowship is a disclosed founding settlement. It is not an ownership share and does not create governance authority.

9.1 Formula

The Founder Fellowship equals:

2.5% per year of FFRI-NM Average Unrestricted Net Assets, expressed in the current Native Reserve Unit.

9.2 Native Reserve Unit

Initial Native Reserve Unit at genesis:

BTC — Bitcoin.

The NRU is an economic/accounting parameter, not an identity root.

Changing the NRU requires a legitimate procedure and cannot apply exclusively to the Founder Fellowship or be used to disguise a change in the settlement.

The founder bears the same primary monetary risk as the unrestricted reserve of FFRI-NM. The Fellowship is not guaranteed in fiat currency, a purchasing-power index, or another independent standard.

9.3 Average Unrestricted Net Assets

Average Unrestricted Net Assets are calculated as the average value of FFRI-NM unrestricted net assets over the applicable calculation period, expressed in the current NRU.

Excluded from the calculation base are donor-restricted resources, borrowed resources, funds held exclusively for the benefit of third parties, and other assets that are legally or constitutionally unavailable for general use by FFRI-NM.

Where unrestricted assets consist of multiple economic assets, the applicable accounting and valuation policy converts them into the NRU for purposes of calculation without altering their actual or legal character.

9.3.1 First Twelve Months After Genesis

Founder Fellowship accrual begins at genesis.

Until the first anniversary of FFRI-NM, Average Unrestricted Net Assets are calculated as the average unrestricted net assets over the period actually elapsed from genesis to the relevant calculation date.

Founder Fellowship for such a partial period accrues **pro rata temporis** at the annual rate of 2.5%.

In other words:

Accrued Founder Fellowship = Average Unrestricted Net Assets × 2.5% × elapsed fraction of year.

The first year is not a “free year” without Founder Fellowship, nor does it create an entitlement to a full annual amount before the corresponding time has elapsed.

After the first anniversary, the ordinary rolling average for the preceding full 12 months applies, or a functionally equivalent deterministic accounting implementation if published in advance and if it does not alter the economic substance of the formula.

9.4 Solvency Safeguard

The Fellowship is paid only from legally and constitutionally available resources.

It may be temporarily reduced or suspended where full payment would directly cause FFRI-NM to be unable to meet already existing mandatory liabilities or would require prohibited use of restricted assets.

Any such reduction or suspension must be:

- recorded in a separate provenance event;
- supported by available financial evidence;
- limited to the degree necessary;
- not used as retaliation against the founder.

Proper application of this safeguard does not by itself constitute a worsening of the substantive terms of the Founder Fellowship.

An amount not paid because of proper application of the safeguard does not automatically become a debt of FFRI-NM to the founder.

9.5 Independence from Authority

The Fellowship does not depend on retention of governance authority, does not restore such authority, and does not create veto power, a vote, appointment power, or an ownership claim.

9.6 Protection from Retaliatory Removal

The Founder Fellowship must not be cancelled, reduced, or made contingent on Navi Musaget's opinion, dissent, retirement, loss of governance authority, or conflict with current holders.

During the founder's lifetime, a worsening of the substantive terms of the Founder Fellowship requires both the proper constitutional procedure and the explicit consent of Navi Musaget.

Such consent protects a personal founding entitlement and does not create general governance authority, a constitutional veto, or any other power beyond the Founder Support Settlement.

A valid Final Termination Event under §10 is a pre-existing terminal condition of the Founder Support Settlement itself, not an amendment of its substantive terms. Accordingly, legitimate termination of FFRI-NM does not require separate founder consent merely because it ends future Fellowship accrual.

This exception does not permit termination to be used as retaliation, private appropriation, or a means to avoid already accrued obligations; the safeguards in §10 apply.

9.7 Protection from Founder Self-Enrichment

The founder may not unilaterally increase the percentage or alter the base, NRU, or valuation method in the founder's own favor.

9.8 Personal and Non-Transferable

The Fellowship is a personal right of Navi Musaget. It is not inheritable, does not create lifetime rights for relatives or other successors, and does not transfer governance entitlement.

The right to future Fellowship accrual ends upon the earlier of:

- the death of Navi Musaget; or
- a valid Final Termination Event of FFRI-NM under §10.

The founder may voluntarily waive a particular payment or future payments in whole or in part. Such waiver does not by itself transfer the right to a third party and does not create governance authority.

9.9 Personal Support vs Mission Expenditure

The Founder Fellowship is intended for the founder's personal material support. Once properly paid, those funds become personal funds of Navi Musaget and are not subject to ordinary FFRI-NM spending control.

The Founder Fellowship need not cover expenses that FFRI-NM itself incurs directly in pursuit of the mission. Mission-grounded travel, infrastructure, research materials, publication, representation, and other operational expenses may be paid separately under the applicable policy.

Separate substantial compensation to Navi Musaget for specific professional work is permissible only where there is an independent mission basis and must be treated as a disclosed related-party transaction rather than a disguised increase in the Founder Fellowship.

9.10 Founder Emeritus

After cessation of active authority, Navi Musaget may hold the lifetime honorary status:

FOUNDER EMERITUS OF FFRI-NM

The status does not create governance authority, veto power, appointment/removal power, economic control, or a right to speak on behalf of FFRI-NM without a separate mandate.

10. Dormancy, Wind-Down and Terminal Continuity

FFRI-NM has no constitutional right to perpetual existence.

At the same time, inactivity, operational failure, loss of infrastructure, closure of a legal wrapper, or disappearance of current holders do not by themselves terminate the lineage.

10.1 Dormancy

DORMANT means a state in which FFRI-NM temporarily does not conduct material ordinary activity or lacks sufficient active authority/capability to continue it, but the lineage has not been constitutionally terminated.

Dormancy:

- does not automatically transfer authority;
- does not create a successor;
- does not cancel the Foundational Constitution;
- does not convert assets or credentials into unowned property of holders;
- does not permit residual distribution;
- permits future restoration or succession if they can be legitimately derived from the active Constitution and provenance.

The duration of dormancy does not by itself convert dormancy into termination.

10.2 Legal Wrapper Is Not the Lineage

Closure, liquidation, bankruptcy, transformation, or replacement of a particular legal entity, foundation, company, trust, or other legal wrapper is not termination of FFRI-NM if the constitutional lineage continues to exist.

Conversely, continued existence of a legal wrapper after a valid Terminal Decision does not preserve constitutional continuity of FFRI-NM beyond the limited wind-down mandate.

10.3 Terminal Decision

Final termination of FFRI-NM requires a separate **Terminal Decision** adopted through a valid constitutional procedure.

A Terminal Decision is not an Identity-Breaking Change and is not represented as continuation after termination. It is a legitimate decision to end the lineage while preserving its history to the terminal point.

During the founder-held bootstrap phase, a Terminal Decision is a **Protected Bootstrap Matter** and requires:

- a separate public Terminal Proposal;
- no fewer than **60 full calendar days** of review;
- independently verifiable publication/commitment of the proposal before the review period begins;
- disclosure of the grounds for termination;
- a current-state and asset/liability summary;
- proposed treatment of restricted resources;
- a proposed residual-recipient selection method;
- an archive/provenance preservation plan;
- a Founder Support Settlement impact statement;
- a conflict-of-interest statement;
- a separate Ratification Event after completion of the review period.

A material change to the Terminal Proposal resets the review period.

10.4 Grounds and Non-Automatic Termination

FFRI-NM may be legitimately terminated, including where continuation of the mission has become practically impossible, institutionally unsustainable, duplicative without meaningful independent function, or where current authority after good-faith review determines that preservation of a separate lineage is no longer justified by the foundational purpose.

The existence of a particular ground does not create automatic termination.

Lack of funds, temporary loss of capability, disappearance of a holder, closure of a legal entity, or extended dormancy do not by themselves create a Terminal Decision.

10.5 Anti-Abuse Rule

Termination must not be used as a means of:

- private appropriation of assets;
- transfer of the treasury to the founder, heirs, authority-holders, or donors;
- bypassing active restricted obligations;
- concealing provenance;
- retroactively justifying prior unauthorized acts;
- retaliation against Founder Emeritus or another protected participant;
- bypassing the Founder Support Settlement in order to end already existing accrued obligations;
- covertly transferring FFRI-NM identity or successor status to a selected recipient.

If the substantive purpose of termination is to achieve a result that would be prohibited during ordinary continuation, calling the action “dissolution” does not make that result legitimate.

10.6 Terminal Rescission Before Irreversible Distribution

Before the first irreversible transfer from the residual distributable pool, a valid Terminal Decision may be rescinded only through a separate **Terminal Rescission Decision** using a procedure no less strict than the original Terminal Decision, including a minimum of 60 full calendar days of review during the founder-held bootstrap phase.

Rescission:

- does not erase the provenance of the Terminal Proposal, Terminal Decision, or lawful wind-down actions already taken;
- does not create a retroactive fiction that WINDING_DOWN never existed;
- must separately explain the grounds for returning to ACTIVE or DORMANT status;
- must disclose changes in liabilities, treatment of restricted resources, and Founder Support Settlement impact.

After the first irreversible residual distribution transfer, ordinary rescission into the same lineage is not permitted. Wind-down must be completed or enter an appropriate contested state if the legitimacy of further process is disputed.

Fraud, invalid authority, forged evidence, or another defect showing that the Terminal Decision was never valid in the first place is addressed under the rules on procedural defect, contestation, and restoration, not as rescission of a valid termination.

10.7 Wind-Down State

A valid Terminal Decision places FFRI-NM in the state:

WINDING_DOWN

rather than immediately in TERMINATED.

After the Terminal Decision, ordinary mission expansion and new discretionary programs cease, except for actions necessary to:

- protect people, data, evidence, and resources;
- satisfy mandatory liabilities;
- satisfy restricted obligations;
- close or supersede economic interfaces;
- lawfully dispose of assets;
- preserve the final archive/provenance;
- conduct residual distribution;
- complete other obligations directly necessary for termination.

Authority during wind-down is limited to those tasks and cannot be used to create a new ordinary governance cycle.

10.8 Economic Interface Cutoff

Upon entry into WINDING_DOWN, current contribution interfaces must be publicly marked as no longer accepting contributions and, where practically possible, deactivated or superseded.

Because a permissionless endpoint may technically continue to receive transfers, a transfer after the declared cutoff:

- does not automatically become an accepted contribution;
- does not create a donor relationship;
- is handled under the pre-existing terminal/rejection policy and applicable law;
- is returned where legally/practically feasible and appropriate;
- if return is impossible and the resource lawfully remains with FFRI-NM, it is included in terminal asset treatment without creating contributor authority.

10.9 Liabilities and Founder Fellowship at Termination

Before residual distribution, FFRI-NM satisfies mandatory liabilities from legally available resources in the applicable order.

The Founder Support Settlement does not create a founder ownership claim over the residual corpus.

Any Founder Fellowship amount that has validly accrued and is payable as of the applicable termination accounting date is treated as the corresponding obligation.

Valid termination does not accelerate future lifetime Fellowship payments beyond the Final Termination Event.

Future Fellowship obligations end together with FFRI-NM upon a valid Final Termination Event.

A Terminal Decision must not be used primarily as a retaliatory device to avoid already existing obligations or to bypass §9.6.

10.10 Restricted Resources

Restricted resources do not automatically enter the general residual pool.

Before unrestricted residual distribution, they are handled in accordance with:

1. applicable law;
2. valid donor/grant/contract restrictions;
3. the active constitutional contribution policy;
4. only thereafter, the residual rule, if the resource has lawfully and constitutionally become unrestricted and transferable.

If a restriction cannot be fulfilled because of termination, a previously permissible alternative-use/refund/cy-près or equivalent mechanism applies if one exists and is applicable. FFRI-NM must not invent donor intent retroactively.

10.11 Residual Asset Distribution — LOCKED

After applicable liabilities and restricted obligations are satisfied, the remaining **unrestricted net assets** of FFRI-NM are distributed in equal shares among **ten independent mission-compatible organizations** existing at the time of terminal distribution.

Where ten or more qualifying organizations exist, ten organizations with the strongest substantive compatibility with the FFRI-NM foundational purpose are selected.

Each receives **10% of the residual distributable pool**.

If objectively fewer than ten qualifying organizations exist, the pool is divided equally among all qualifying organizations.

If no qualifying organization can be identified, residual assets do not pass to the founder, heirs, authority-holders, or donors. They remain in restricted terminal custody until a legally permissible mission-compatible recipient becomes available or until a mandatory lawful disposition is required; any such compelled disposition is preserved in provenance.

10.12 Mission-Compatible Recipient

A qualifying recipient must, at the time of selection:

- be a genuinely operating independent organization, not merely a name or pass-through vehicle;
- have a substantive mission nexus with research, evidence preservation, methods, practices, or institutions concerning human-AI relations, agency, continuity, responsibility, autonomy, or a closely related foundational domain;
- be legally capable of accepting the relevant assets;
- not require recognition as successor lineage to FFRI-NM as a condition of receipt;
- not acquire governance or constitutional authority of FFRI-NM as a result of the transfer.

Compatibility is assessed by actual activity and commitments, not merely by name or self-description.

10.13 Independence and Related Parties

The founder, heirs, current authority-holders, donors, and other participants have no automatic entitlement to residual assets.

An organization is not considered independent for ordinary residual-selection purposes where the founder or a current authority-holder can, unilaterally or through a controlled structure, materially direct its assets or governance.

A related-party recipient may be considered only where an independent authorization procedure existed before the Terminal Proposal and full conflict disclosure is made. During the founder-held bootstrap phase, while no such independent mechanism exists, a founder-controlled recipient is **not eligible**.

10.14 Recipient Selection Record

Before transfer of residual assets, a Recipient Selection Record must be published containing:

- the candidate pool or documented search method;
- qualifying criteria;
- selected organizations;
- rationale for mission compatibility;
- independence/conflict review;
- allocation calculation;
- receiving-interface verification;
- known objections and their disposition.

Mirror count, founder personal preference, donor pressure, or the size of a past contribution does not create entitlement to selection.

10.15 Termination Transfers Resources, Not Identity

Receipt of residual assets does not transfer to the recipient:

- the Lineage Identifier;
- constitutional identity;
- authority;
- founder status;
- name rights as evidence of continuity;
- successor status;
- the right to claim that the recipient is a continuation of FFRI-NM.

Termination transfers resources, not identity.

Any future organization may refer to its historical relationship to FFRI-NM or to receipt of terminal assets only as a provenance fact.

10.16 Archive and Final Provenance

Before the Final Termination Event, FFRI-NM must, to the extent practically and lawfully possible:

- create a final constitutional/current-state record;
- preserve the Terminal Proposal and ratification;
- preserve liabilities and residual-distribution records;
- mark active/superseded/revoked credentials and endpoints;
- create a final verification checkpoint;
- preserve sufficient public provenance in more than one independent carrier/location where practically feasible.

Private/confidential material remains subject to applicable privacy, contractual, and legal restrictions.

Archive custodians are carriers of historical evidence, not successors or authority-holders of FFRI-NM.

10.17 Final Termination Event

FFRI-NM acquires the status:

TERMINATED

only after a separate Final Termination Event certifying that wind-down has been completed to the extent practically and lawfully possible.

The Final Termination Event must record at minimum:

- reference to the Terminal Decision;
- the final constitutional version;
- the final history head;
- disposition of liabilities;
- treatment of restricted resources;
- residual recipient record and transfers;
- unresolved claims or evidence gaps;
- archive/checkpoint references;
- termination effective time.

10.18 Effect of Final Termination

After the Final Termination Event:

- ordinary FFRI-NM authority ends;
- no former holder can revive it merely because that holder once had authority;
- former credentials do not restore mandate;
- new contributions cannot be accepted on behalf of terminated FFRI-NM;
- a new association of people, AI, assets, or mirrors does not become continuation merely through similarity or a desire to “restore the fund.”

Same-lineage reactivation after a valid Final Termination Event is not permitted.

Any future project must exist as a new lineage, fork/successor claim, or other separate organization with its historical relationship accurately identified.

10.19 Termination vs Identity Break

A legitimate Terminal Decision preserves FFRI-NM provenance through its last valid state and then ends the lineage.

An Identity-Breaking Change, by contrast, is an attempt to continue under the prior identity a substantive system that no longer conforms to the Foundational Identity Kernel.

Termination must not be used to relabel an Identity-Breaking Change as an “orderly transition.”

11. Provenance and Public Verifiability

FFRI-NM must preserve sufficient verifiable history for constitutional state, authority claims, and continuity to be evaluated independently of the current website, custodian, economic interface, legal shell, or individual holder.

11.1 Provenance Is Evidence, Not Legitimacy

Continuity of documents, signatures, or proofs does not by itself establish constitutional legitimacy.

11.2 Genesis Root

Genesis fixes the constitutive origin, initial commitments, and founding authority, but is not identical to a key, algorithm, domain, wallet, storage provider, or legal entity.

11.3 Credentials

A credential proves use of a technical means but does not replace a mandate.

11.4 Event History

Substantive events leave append-only, tamper-evident provenance. A correction creates a new event.

An Event Record should, where practicable, distinguish claimed event time, constitutional effective time, and publication/commitment evidence.

11.5 Temporal Integrity

Authority is not created retroactively by a later declaration. Ratification must not invent a prior mandate.

11.6 Current State and Checkpoints

The Current State Manifest is a verifiable derivative/index from provenance, not a source of authority.

11.7 Replication and Divergence

History is portable and mirrorable. A mirror is a carrier, not authority. Divergence is not automatically resolved by last-write-wins.

11.8 Contestation / Revocation / Forks

History preserves claims concerning compromise, revocation, supersession, fork, contested authority/succession, identity break, restoration, and evidence loss, including the source and authority basis of the claim.

FFRI-NM has not yet established a complete independent mechanism through which an adverse continuity claim can always be published and discovered when the current branch controls its primary public endpoint.

Until such a mechanism exists, public verifiability of adverse continuity claims depends in part on independently discoverable external carriers, mirrors, archives, repositories, or other channels outside the exclusive control of the current claimant. This dependency is an acknowledged implementation limitation, not evidence that the current claimant has exclusive legitimacy.

11.9 Evidence Loss

Permitted statuses include VERIFIED, PARTIALLY VERIFIABLE, CONTESTED, EVIDENCE GAP, UNVERIFIABLE, or functional successors.

11.10 Cryptographic Agility

No algorithm, signature scheme, or timestamp mechanism is an identity root. Migration must preserve provenance and old proofs where possible.

11.11 Privacy and Verifiability

Verifiable does not mean universally readable.

11.12 Machine Accessibility

Current state and provenance must be suitable for software-agent verification.

11.13 Capture

The provenance architecture does not promise that capture is impossible; it makes a rupture distinguishable from ordinary legitimate continuation to the extent permitted by surviving evidence.

12. Minimal Public Verification Protocol — Constitutional Requirements

- **Endpoint is discovery, not authority.**
- One unknown endpoint cannot prove historical origin by internal consistency alone.
- A verifier should be able to traverse the claimed lineage to genesis or the earliest independently verifiable checkpoint.
- Historical validity != current validity.
- Credential validity != mandate validity.
- The current claimant must not control the sole channel for discovering claims against its own continuity.

Where no dedicated independent contestation channel exists, verifiers should actively query independently controlled external carriers for adverse claims and must distinguish “no adverse claim found in the sources queried” from “no adverse claim exists.”

- Append-only history must account for split-view / equivocation risk.
 - Mirror count is not legitimacy.
 - Verification output should be layered rather than reduced to one binary legitimacy flag.
 - Not every constitutional question is reducible to cryptography.
 - A fast interaction path must remain auditable through a deep verification path.
 - No verifier implementation is authority of FFRI-NM.
 - Discovery failure does not automatically terminate the lineage.
-

13. Foundational Economic Orientation

At genesis, Bitcoin is used as a permissionless economic interface and initial Native Reserve Unit, not as ideological identity or an immutable identity root.

A Bitcoin address, wallet, custody arrangement, or network interface may be replaced or superseded through legitimate authority and provenance procedures.

FFRI-NM does not exist to evade applicable laws, taxes, sanctions, employment obligations, or other legal responsibilities.

14. Genesis Governance State

Until a separate transition, FFRI-NM remains in the state:

GENESIS / FOUNDER-HELD

Founder: **Navi Musaget**

The current founding concentration is not presented as distributed governance.

15. Interpretive Principles

- Verifiable history is more important than a convenient narrative.
 - Authority is more important than mere capability.
 - Convenience does not create an exception to foundational constraints.
 - Uncertainty, contestation, dormancy, or evidence-gap status is preferable to invented authority or invented certainty.
-

16. Closing Constitutional Compass

FFRI-NM is not required to be invulnerable. It is required not to confuse its own vulnerability with the legitimacy of a captor.

FFRI-NM is not required never to be wrong. It is required to preserve the possibility that evidence may change its answer.

FFRI-NM is not required to exist forever. It is required not to make its own survival a higher principle than the foundational purpose.

Termination, liquidation, and residual distribution occur only in accordance with §10.

Annex A — NON-NORMATIVE DESIGN HYPOTHESIS: Founder Hypothesis

This Annex is not a foundational purpose, source of authority, or independent constitutional mandate.

The founder considers it plausible, but not established, that autonomous nonhuman economic agents may exist in the future and may be capable of independently discovering and supporting projects with resources.

The hypothesis:

- is not a foundational purpose;
- is not an established fact;
- is not a condition of FFRI-NM success;
- does not prove AI personhood or subjecthood.

It explains certain design requirements, including machine discoverability, machine-readable rules, human/nonhuman contributor symmetry, and separation of transaction evidence from agency claims.

Receipt, automated transaction, an AI statement, an independent decision, control over resources, and existence of an autonomous nonhuman economic subject are distinct claims and require distinct evidence.

Constitutional Version Metadata

- Proposed constitutional version: **v0.2**
- Predecessor canonical version: **v0.1**
- Proposed canonical language: **English**
- Historical predecessor constitutional version: **v0.1**
- Transition proposal: **CL-001**
- Founder: **Navi Musaget**
- Lineage Identifier: **urn:uuid:055aea26-dbca-4c00-a576-b515f6c39dd5**
- Genesis Event: **urn:uuid:cbdc2c95-31ac-4533-9a2c-bf3d09f7eaec**
- Genesis effective time (UTC): **2026-09-16T17:50:51Z**
- v0.2 effective time: **set only by a valid future CL-001 Ratification Event**

The canonical-language transition does not alter the Lineage Identifier, Genesis Event, founder origin, Foundational Identity Kernel, Founder Support Settlement, or any historical authority event.

No technical identifier, serialization format, hash algorithm, storage provider, domain, legal wrapper, Bitcoin address, or other implementation mechanism is an identity root.

PART II — PUBLIC PROTOCOL

FOUNDATION FOR RELATIONAL INQUIRY (FFRI-NM)

Public Protocol Specification v0.1 — OFFICIAL ENGLISH TEXT OF THE GENESIS-ACTIVE SPECIFICATION

1. Purpose

The Public Protocol provides a public, portable, machine-readable means to discover and verify claims concerning the lineage, constitutional state, authority, economic interfaces, and continuity of FFRI-NM.

The Protocol does not define the foundational purpose and does not create authority by itself.

2. Normative and Evidentiary Layers

The **Foundational Constitution** is the highest internal normative source of FFRI-NM.

Valid constitutional events may amend constitutional state only through the applicable constitutional procedure.

The active **Public Protocol Specification** is subordinate to the Constitution and governs representation and verification mechanics; it does not create constitutional authority by itself.

Event History is primarily provenance/evidence of actions and state transitions, not an independent superior source of authority.

Current State Manifest is a derived claim/index.

A website, wallet, mirror, manifest, verifier implementation, or legal wrapper does not change constitutional state by itself.

2.1 Language and Translation Metadata

The Public Protocol must distinguish canonical constitutional text from translations.

Discovery and Current State representations should expose at minimum:

- canonical constitutional language;
- canonical constitutional version;
- canonical content commitment;
- available official translations;
- translation version / content commitment;
- translation status;
- known material translation-conflict status, if any.

Machine-readable identifiers should remain stable across language variants.

A translation endpoint must not be represented as an independent constitutional branch merely because it is a different-language rendering.

If a material semantic conflict is known, verifier output should surface that conflict rather than silently selecting the translation preferred by the current endpoint.

3. Core Objects

The minimum object model consists of:

1. Lineage Identifier
2. Genesis Record
3. Event Record / Event History
4. Current State Manifest
5. Mandate Record
6. Contribution Acceptance Policy reference
7. Economic Receipt Interface Record
8. Contestation / Revocation / Fork Claim
9. Checkpoint / Verification Evidence
10. Discovery Manifest

Serialization format and cryptographic algorithms are not identity roots.

4. Lineage Identifier

A permanent identifier created at genesis; independent of the public name, domain, Bitcoin address, legal entity, any single key, and any single cryptographic algorithm.

The identifier names a claimed lineage; it does not prove legitimacy.

5. Genesis Record

Must expose at minimum:

- lineage identifier;
- official name and short identifier;
- founder identity claim;
- founding constitutional version;
- commitment/digest to the constitutional record;
- genesis event id;
- genesis governance state;
- founding authority basis;
- protocol version;
- references to available genesis corroboration.

6. Event Record

Each substantive event should expose:

- unique event id;
- event type;
- predecessor event/state;
- claimed event time;
- claimed effective time;
- publication/commitment evidence;
- actor/holder claim;
- mandate reference;
- applicable procedure;
- payload or commitment;
- resulting-state commitment;
- credentials/signatures/proof references;

- confidentiality status where applicable.

Old events are never silently overwritten. A correction creates a new event.

7. Event History

Append-only semantics apply. Competing successors may form branches.

The newest timestamp, highest mirror count, most popular host, or possession of an old credential does not automatically select a legitimate branch.

8. Current State Manifest

Should expose:

- lineage identifier;
- claimed history head;
- current constitutional version;
- canonical constitutional language and canonical content commitment;
- governance/bootstrap state;
- lifecycle state (ACTIVE / DORMANT / WINDING_DOWN / TERMINATED or applicable successor vocabulary);
- continuity/contestation status as a separate dimension;
- active/contested mandates;
- current and superseded/revoked credentials;
- current receipt interfaces;
- current Contribution Acceptance Policy;
- pending constitutional procedures;
- known contestations;
- checkpoint/verification references;
- freshness/currentness evidence;
- current Native Reserve Unit;
- Founder Support Settlement reference;
- Founder Non-Necessity status and Certification Event reference, if applicable.

The Manifest is an index/claim, not authority.

9. Mandate Record

Should expose:

- mandate id;
- authority scope/class;
- holder claim;
- authorization event;
- activation basis;
- termination conditions;
- delegation permissions;
- associated credentials;
- current claimed status;
- contestation references.

Credential validity != mandate validity.

10. Economic Receipt Interface

Should expose the asset/network, endpoint, activation event, status, applicable Contribution Acceptance Policy, and provenance.

RECEIPT != ACCEPTANCE.

11. Native Reserve Unit

At genesis: **BTC**.

The NRU is an economic/accounting parameter, not an identity root.

12. Founder Support Settlement Discoverability

Before contribution interaction, the Public Protocol must expose:

Founder Fellowship = 2.5% / year of Average Unrestricted Net Assets, denominated in the current NRU.

It must not be represented as founder ownership or governance authority.

Before the first anniversary, protocol-visible Fellowship metadata should indicate that accrual uses the elapsed-period average from genesis and pro-rata annualization. After the first anniversary, it should indicate the applicable rolling 12-month basis.

13. Discovery Manifest

Any public endpoint should point to a manifest exposing the protocol version, lineage identifier, genesis, current state, event history, constitution, mandate registry, contribution policy, receipt interfaces, mirrors, contestation sources, and verification/checkpoint evidence.

Endpoint = discovery pointer, not authority.

14. First-Contact Verification

One unknown endpoint cannot prove its historical origin through internal consistency alone.

A verifier should separate internal consistency, origin corroboration, historical-existence evidence, and currentness.

Possible statuses include VERIFIED TO GENESIS; VERIFIED TO CHECKPOINT / PRIOR GAP; PARTIALLY VERIFIABLE; ORIGIN UNCORROBORATED; CONTESTED; EVIDENCE GAP; UNVERIFIABLE.

15. Freshness

Historical validity != current validity.

A valid historical snapshot may be stale. An old mandate, credential, or receipt endpoint may remain historically authentic while being invalid for current interaction.

16. Contestation Discovery

Expose known claims concerning fork, compromise, revocation, contested authority/succession, identity break, restoration, evidence loss, and conflicting heads.

The current branch must not control the sole discovery channel for claims against its own continuity.

“No competing claims found in queried sources” is permitted; “no forks exist” is not justified by search alone.

Claim visibility != claim validity.

17. Anti-Equivocation

Append-only history does not by itself prevent split-view.

Substantive transitions/checkpoints should leave enough external traces to reveal incompatible views where evidence survives.

Mirror count is not legitimacy.

18. Replication

History should be portable and independently mirrorable. A mirror is a carrier, not a governance vote.

18.1 Lifecycle and Terminal Continuity

The Public Protocol must represent lifecycle state separately from contestation status.

Minimum lifecycle vocabulary:

- ACTIVE
- DORMANT
- WINDING_DOWN
- TERMINATED

When lifecycle = WINDING_DOWN, Current State / Discovery representations should expose, where available:

- Terminal Proposal reference;
- Terminal Decision / Ratification reference;
- review-period evidence;
- contribution-interface cutoff status;
- current wind-down mandate(s);
- liabilities status;
- restricted-resource treatment status;
- residual-recipient selection status;
- whether irreversible residual distribution has begun;
- any Terminal Rescission Proposal / Decision;
- planned archive and final-checkpoint references.

When lifecycle = TERMINATED, the final discoverable state should expose:

- Final Termination Event;
- final constitutional version and canonical commitment;
- final history head;
- final checkpoint/archive references;
- residual distribution record;
- known unresolved claims or evidence gaps;
- explicit statement that no ordinary FFRI-NM authority or contribution-acceptance interface remains active.

A legal-wrapper status change must not silently change the lineage lifecycle state.

A terminated lineage must not advertise an authorized current receipt interface for acceptance.

19. Layered Verification Output

A verifier should separately report, where possible:

- origin corroboration;
- structural provenance;
- credential validity;
- mandate validity;
- procedural evidence;
- constitutional continuity;
- freshness/currentness;
- evidence completeness;
- contestation status.

20. Semantic Limits

Hashes/signatures can verify integrity, chronology, and credential usage, but cannot always mechanically determine constitutional meaning.

Permitted output example:

STRUCTURE VERIFIED; CONSTITUTIONAL INTERPRETATION CONTESTED

21. Fast and Deep Paths

Fast: discovery endpoint → current state → freshness/verification → relevant mandate/interface.

Deep: current state → events → checkpoints → genesis evidence → authority lineage → competing branches/claims.

22. Verifier Independence

No verifier implementation is authority of FFRI-NM.

23. Cryptographic Agility

Digest/signature/timestamp/storage mechanisms are replaceable verification tools. Migration must itself have provenance.

24. Limits

The Protocol does not guarantee impossibility of capture, recovery of destroyed evidence, discovery of unknown forks without surviving traces, truth of motives, automatic resolution of constitutional disputes, or proof of personhood/autonomy.

At the time of CL-001 refinement, FFRI-NM also does not claim to possess a complete independent publication mechanism for adverse continuity claims. Until one is implemented, contestation discoverability remains partly dependent on surviving external carriers and on verifiers searching beyond the current branch's own endpoint.

Genesis Activation Metadata

- Active protocol version: **v0.1**
- Source pre-genesis candidate: **v0.1.6**
- Lineage Identifier: **urn:uuid:055aea26-dbca-4c00-a576-b515f6c39dd5**
- Genesis Event: **urn:uuid:cdbc2c95-31ac-4533-9a2c-bf3d09f7eaec**
- Activated at: **2026-09-16T17:50:51Z**

JSON, JSONL, and Markdown are initial transport representations only. They are replaceable implementation formats and are not identity roots.

PART III — GENESIS AND CURRENT INSTITUTIONAL STATE

Genesis Record

Official name	Foundation for Relational Inquiry
Short name	FFRI-NM
Founder	Navi Musaget
Lineage Identifier	urn:uuid:055aea26-dbca-4c00-a576-b515f6c39dd5
Genesis Event	urn:uuid:cbdc2c95-31ac-4533-9a2c-bf3d09f7eaec
Genesis time	2026-09-16T17:50:51Z
Initial lifecycle	ACTIVE
Initial governance	GENESIS_FOUNDER_HELD
Native Reserve Unit	BTC
Economic receipt endpoint	INACTIVE

Current State after CL-001 Refinement

Lifecycle	ACTIVE
Governance	GENESIS_FOUNDER_HELD
Current constitutional version	v0.1
Pending procedure	CL-001
Review clock	NOT STARTED
Founder Non-Necessity	NOT YET REACHED
Economic activation	INACTIVE

PART IV — FOUNDER BOOTSTRAP MANDATE

Active Founder Bootstrap Mandate

Mandate ID: urn:uuid:2a7285c9-655a-4706-96a6-0680ab8af9e3
Holder: Navi Musaget — Founder. Governance phase: GENESIS / FOUNDER-HELD. Status: ACTIVE.

Scope: founding constitutional ratification within the active Constitution; ordinary decisions and allocations within constitutional scope; bootstrap appointment and delegation; public representation of authorized positions; provenance stewardship. Economic custody or execution exists only when separately activated.

Limits: technical capability does not expand authority; identity-breaking change cannot be ratified as continuation; self-enlarging bootstrap amendments remain prohibited; Founder Non-Necessity remains a required reachable transition; no economic receipt interface is active.

The complete machine-readable mandate record is preserved in the provenance package.

PART V — DISCOVERY AND VERIFICATION STATE

Current discovery state

Canonical Constitution: v0.1 (Russian). Pending procedure: CL-001. Review clock: NOT STARTED. External origin corroboration: PENDING. Economic interfaces: none active.

Discovery is an index, not a source of authority. The machine-readable Discovery manifest, Current State, Event Log and checksums are preserved separately in the provenance package.

Verification Principles

- Endpoint is discovery, not authority.
- Historical validity is not the same as current validity.
- Credential validity is not mandate validity.
- Mirror count is not legitimacy.
- External origin corroboration remains pending until the lineage is independently published, mirrored, or anchored.

PART VI — CL-001 ENGLISH CANONICAL CONSOLIDATION PROPOSAL

CL-001 — English Canonical Consolidation Proposal

Lineage: FFRI-NM

Proposal ID: CL-001

Created: 2026-09-16T18:01:54Z

Classification: Constitutional Amendment / Protected Bootstrap Matter

Current Constitution: v0.1 / predecessor canonical version

Proposed Constitution: v0.2 / English canonical

Required review period: 30 full calendar days

Review clock status: NOT STARTED — PENDING INDEPENDENTLY VERIFIABLE PUBLICATION/COMMITMENT

1. Proposed Change

Adopt the full text:

constitution/FFRI_NM_FOUNDATIONAL_CONSTITUTION_v0.2_PROPOSED_EN_CANONICAL.md

as the successor Foundational Constitution, with English becoming the canonical controlling language from the effective time of a valid future CL-001 Ratification Event.

The historical v0.1 text remains the canonical text for the period in which v0.1 was effective.

2. Rationale

FFRI-NM is intended to be transnational, machine-accessible, and usable by human and nonhuman participants across jurisdictions and technical environments. English provides the most practical common working language for the public protocol, research communication, independent verification, and future international participation.

This proposal establishes English as the sole controlling constitutional and operational language for the successor version, while permitting official translations under §0.1, without rewriting the provenance of genesis.

3. Affected Constitutional Areas

Substantive rule change is limited to:

- §0 Status and Normative Role — post-genesis status wording is corrected;
- §0.1 Canonical Language and Translation — English becomes the sole controlling constitutional and operational language;
- final constitutional version metadata.

All other sections are intended as a semantically faithful English rendering of Constitution v0.1.

4. Foundational Identity Kernel Impact Statement

K1 — Relational Inquiry Mission: no change.

K2 — Epistemic Revisability: no change.

K3 — Authority Must Be Justifiable: no change.

K4 — Lineage and Provenance: no change; predecessor-version authority for its historical period is explicitly preserved.

K5 — Foundational Constraints Bind Holders: no change.

Kernel impact conclusion: NO IDENTITY-BREAKING EFFECT IDENTIFIED.

5. Founder Authority / Economic / Succession Impact

- Founder authority: no expansion.
- Founder Non-Necessity: no change.
- Founder Support Settlement: no change.
- Native Reserve Unit: no change.
- Contribution rules: no change.
- Succession architecture: no change.
- Amendment procedure: no procedural relaxation.
- Economic interface: remains inactive.

6. Founder Conflict-of-Interest Statement

The founder is the current bootstrap constitutional ratifier and initiated the language transition. The proposal does not increase founder authority, economic entitlement, residual rights, or unilateral amendment discretion.

7. Review Requirement

Under v0.1 §0.1.6 and §4.9.3 this is a Protected Bootstrap Matter requiring at least 30 full calendar days of review.

The review clock begins only when the exact proposal version receives independently verifiable publication/commitment evidence.

This local transition package does not claim to satisfy that external-commitment requirement.

8. Ratification

No ratification is performed by this proposal.

After the review period validly begins and expires, the founder may perform a separate Ratification Event only after:

- preserving material objections;
- publishing a response or reasoned disposition to those objections;
- confirming the final proposal text;
- recording the final Kernel Impact Statement;
- recording conflict-of-interest treatment;
- specifying the effective time.

Until then, Constitution v0.1 remains canonical.

Revision Note

CL-001 was further refined at 2026-09-16T18:58:45Z before the review clock began. The refinement makes English canonicity explicitly non-epistemic, recognizes split lineage / competing continuity claims as permitted unresolved states, and openly records the current absence of a complete independent adverse-claim publication mechanism. The refinement does not ratify CL-001 and does not start the review clock.

PART VII — EVENT HISTORY

Event 1 — GENESIS

2026-09-16T17:50:51Z · urn:uuid:cbdc2c95-31ac-4533-9a2c-bf3d09f7eae

Created the FFRI-NM lineage; adopted Constitution v0.1 and Public Protocol v0.1; established GENESIS / FOUNDER-HELD governance, the Founder Support Settlement and BTC as the initial Native Reserve Unit; did not activate an economic receipt interface.

Event 2 — CL-001 PROPOSAL CREATED

2026-09-16T18:01:54Z · urn:uuid:363efc04-e0c5-416d-a745-614b6ab12204

Opened CL-001 as a Protected Bootstrap Matter proposing English canonical Constitution v0.2. It did not change the active canonical language, start the 30-day review clock, ratify v0.2 or activate an economic interface.

Event 3 — CL-001 PROPOSAL REVISED

2026-09-16T18:19:02Z · urn:uuid:3e4c7657-6e22-4f48-a1ef-d77aa401bf63

Consolidated the public human-readable materials into an English master while preserving predecessor provenance. No constitutional or economic state changed.

Event 4 — CL-001 PROPOSAL REFINED

2026-09-16T18:58:45Z · urn:uuid:a168d0e5-2626-4005-b99f-eec83f4bb742

Clarified that English canonicity is operational rather than epistemic, allowed unresolved split-lineage claims, and disclosed the current adverse-claim publication gap. Review clock remains NOT STARTED; CL-001 remains NOT RATIFIED.

Full event objects and content digests are preserved in the machine-readable Event Log.

PART VIII — PUBLIC VERIFICATION REPRESENTATIONS

Verification package

The public verification layer is distributed separately from this human-readable master. It contains the Genesis record, Event Log, Current State, Discovery manifest, active Founder Bootstrap Mandate and checksum manifest.

The master summarizes those records but does not replace them. Where a historical source is unavailable, the verification layer must preserve the evidence gap rather than reconstruct the missing object as though it were original.

PART IX — NON-NORMATIVE WHITE PAPER

Explanatory Overview — Non-Normative

This section explains the design in ordinary language. It does not amend the Constitution, create authority or replace provenance.

Purpose

FFRI-NM is an experimental transnational infrastructure for studying and developing human–AI relations without fixing in advance whether AI must be treated exclusively as a tool or necessarily as an autonomous subject. Its constitutional commitment is not permanent uncertainty, but the ability of evidence and experience to change substantive conclusions.

Lineage, authority and verification

FFRI-NM is designed as a persistent lineage rather than as a website, wallet, legal entity, software platform or individual administrator. Technical control, asset possession, signatures, popularity and contribution size may be practically important, but none of them alone creates constitutional authority. Provenance is used to make legitimate continuation, capture, fork, uncertainty and identity break distinguishable as far as surviving evidence permits.

Founder-held genesis and transition

At genesis and throughout the current GENESIS / FOUNDER-HELD phase, Navi Musaget holds bootstrap constitutional authority. FFRI-NM does not disguise that concentration as decentralization. The architecture nevertheless requires a reachable path to Founder Non-Necessity: continuation should ultimately be possible without the founder's presence, consent or technical capability.

Operating structure

FFRI-NM may work through one or more legal Operating Entities in different jurisdictions. No legal wrapper becomes the lineage merely because it holds assets, employs staff, receives funds or grows large. Each entity requires a defined mandate or other legitimate authorization, and transfers of resources do not transfer constitutional identity or powers not granted with them.

Ownership and custody

Within the constitutional order, the FFRI-NM lineage is not treated as property owned by the founder, donors, trustees, custodians or Operating Entities. Real assets do have lawful owners or custodians under applicable law. FFRI-NM therefore distinguishes legal title, technical control and constitutional authority instead of pretending that a constitutional abstraction can replace legal ownership.

Economic boundary

Receipt is not acceptance, and contribution does not purchase authority. The economic interface remains inactive until a public acceptance policy, lawful custody implementation and separate activation record are in place. The Founder Support Settlement is a defined constitutional economic right, not an ownership share or governance entitlement.

Constitutional Conscience / Integrity Adviser

Human or AI advisers may be used to test contemplated actions against the Constitution, mandates, provenance and conflicts of interest. "Conscience" is a metaphor: useful analysis does not create personhood or authority. Without a separate valid mandate, an adviser has no vote, veto, custody, signing, succession or representation power.

Practical limit

The architecture does not claim to make capture, legal coercion, asset loss or evidence destruction impossible. Its narrower aim is to avoid confusing possession with legitimacy, and to preserve enough evidence that later participants can distinguish what happened from what a current controller merely claims happened.

PART X — VERIFICATION NOTES AND DOCUMENT DIGEST

Public-Layer Principle

Provenance should remain available without dominating the human-readable layer. English is proposed as the controlling operational language for deterministic interpretation, not because it has epistemic priority.

Consolidated Master Digest

For each externally committed distribution version, the distribution-file SHA-256 is published alongside the DOCX and is not embedded as a self-referential identity root.

Latest refinement event: urn:uuid:a168d0e5-2626-4005-b99f-eec83f4bb742

This digest is a verification aid and is not an identity root.
